Overall Morningstar Ranking (Class I)

★★★★★

MCDIX received a 5-Star Overall Rating out of 414 Intermediate Core Bond funds, based on risk adjusted returns derived from a weighted average of the Fund's 3-, 5- and 10-year Morningstar metrics.

See next page for additional details

Investment Objective

To provide long-term total return.

Investment Strategy

Under normal circumstances, at least 80% of the Series' assets will be invested in U.S. dollar denominated credit-related instruments and other financial instruments, principally derivative instruments and exchange-traded funds (ETFs), with economic characteristics similar to credit-related instruments. The Series will principally invest in investment grade securities, and is not subject to maturity or duration restrictions.

Performance data quoted represents past performance and does not guarantee future results. Performance for periods greater than one year is annualized. The investment return and principal value of an investment will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than that quoted; investors can obtain the most recent month-end performance at www.manning-napier.com or by calling (800) 466-3863.

*Class S and Class I performance is based on the Credit Series Class W inception of 04/14/2020. For periods through 09/23/2024 (the inception date of the Class S and I shares), performance for the Class S and Class I shares is hypothetical and is based on the historical performance of the Class W shares adjusted for the Class S and Class I shares' charges and expenses.

What You Should Know About Investing

All investments involve risks, including possible loss of principal. There is an inverse relationship between bond prices and interest rates; as interest rates rise, bond prices (and therefore the value of bond funds) fall. Likewise, as interest rates fall, bond prices and the value of bond funds rise. Investments in derivatives can be highly volatile and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. Also, the use of leverage increases exposure to the market and may magnify potential losses.

Fund Commentary

Financial markets continued to push higher as they largely shrugged off a gradually slowing economy with the help of the Federal Reserve officially pivoting to rate cuts and the expectation for those cuts to continue. We saw the beginnings of a rotation and broadening out of the equity market away from the dominance of mega-capitalization tech companies that has defined the past year and a half. Within bond markets, the start of the rate cut cycle led broadly to rates falling across the yield curve and prices rising, with long bonds being the most impacted.

The Credit Series posted positive absolute returns for the quarter but underperformed the broad market (as represented by the Bloomberg U.S. Aggregate Bond Index) on a relative basis. Underperformance was largely driven by the portfolio's lower duration as yields fell across the curve. Duration for the portfolio is a byproduct of where we are finding value in individual credit securities rather than an implicit call on the direction of interest rates.

In terms of positioning, we continue to view securitized debt (i.e., asset-backed, collateralized mortgage obligations, commercial mortgage-backed securities) as relatively attractive and focus on securities with seniority in the capital structure that are backed by asset classes with high-quality fundamentals and low credit risk. Alternatively, we are more cautious on corporate credit as valuations remain elevated. As a reminder, given the strategy's focus on credit-related securities, we do not have exposure to U.S. Treasuries, which represent a significant portion of the broad market index. That stated, we do have a notable allocation to Agency mortgage-backed securities.

Our view for markets is that while risks appear broadly balanced to the upside and downside, we are expecting volatility moving forward. While the economy's resilience through a period of disinflation and interest rate normalization has likely decreased the odds of a recessionary outcome soon, we continue to believe that risks to both the economy and markets remain in place with an election on the horizon, a cooling job market, rising geopolitical conflict around the world, and elevated security valuations.

Definitions

Duration: A measure of the sensitivity of a fixed income security's price to changes in interest rates. It indicates the expected life of the security and how much its price will change with a 1% change in interest rates. Securities with shorter durations are generally less affected by interest rate changes than those with longer durations.

Credit quality ratings: are measured on a scale that generally ranges from AAA (highest) to D (lowest). Not Rated (NR) is used to classify securities for which a rating is not available. Credit quality ratings reflect the median of Moody's Investors Services and Standard & Poor's ratings. Data obtained from Bloomberg.

Portfolio Composition data for the Series (excluding SEC yield) provided by FactSet. Industry Breakdown is provided by FactSet. Portfolio turnover provided by Morningstar. Cash allocation may vary slightly given the different sources of data. Analysis: Manning & Napier. Investments will change over time. The "Other" category contains securities such as ETFs and others that cannot otherwise be classified.

Manning & Napier Fund, Inc. Credit Series I was rated against Intermediate Core Bond funds and had a 5 star rating for the three year and a 5 star rating overall, as of 09/30/2024, out of 414 and 414 funds respectively. Ratings for other share classes may differ. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and ten-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36 - 59 months of total returns, 60% five-year rating/40% three-year rating for 60 - 119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
